DG INTERNS HUB
Learn. Build. Grow.

Linux command	What it does	When to use it
pwd	Displays the current directory	Confirm your location
ls -la	Lists files, including hidden entries	Inspect files and permissions
cd	Changes directory	Navigate the filesystem
mkdir	Creates directories	Organize lab files
touch	Creates an empty file or updates timestamps	Prepare test files
cp	Copies files	Create backups or copies
mv	Moves or renames files	Organize evidence
rm	Removes files	Delete disposable test files carefully
cat	Prints file contents	Read small text files
less	Displays text page by page	Inspect large logs
head	Shows the beginning of a file	Preview logs
tail	Shows the end of a file	Review recent events
grep	Searches text for patterns	Find errors or indicators
find	Searches for files and directories	Locate evidence or configuration
chmod	Changes permissions	Apply least privilege
chown	Changes ownership	Correct file ownership
id	Displays user and group IDs	Check account permissions
whoami	Displays the current username	Verify the active account
ps aux	Lists running processes	Investigate processes
top	Displays live process activity	Inspect resource usage
kill	Sends a signal to a process	Stop a process when authorized
df -h	Shows filesystem capacity	Investigate disk space
free -h	Shows memory usage	Troubleshoot memory pressure
ip a	Shows network interfaces and addresses	Record VM IP addresses
ip route	Displays routing information	Identify the default gateway
ping	Tests reachability using ICMP	Check connectivity
ss -tulpn	Lists listening sockets	Inspect exposed services
dig	Queries DNS records	Investigate DNS resolution
traceroute	Traces a network path	Troubleshoot routing
sudo	Runs a command with elevated privileges when permitted	Perform authorized administration
